in the marshy acreage of Back Bay and the South End. Foundations for the city's schools, hospitals, and great financial institutions were laid then or strengthened.

Annexing communities like East and South Boston, Charlestown and Roxbury, Boston left independent-minded neighbors such as Cambridge and Brookline to themselves. Today an encircling ring of a hundred cities and towns dwarfs Boston proper, whose 660,000 people are only part of the more than three million inhabitants in the metropolitan area.

Proper as they come, the venerable homes of Louisburg Square form the backdrop for a Beacon Hill gentleman out for an afternoon constitutional (left). The highlight of the city's old residential section, Beacon Hill fights commercial encroachment, and state law now protects the harmony of its bricks and cobblestones. Less lucky, the Old State House in nearby downtown bears a gilt eagle that seems to cry defiance of the towering buildings around it (right).

Overwhelmed in the last century by Irish and Italian immigrants, nowadays among the largest elements in the city's population, Old Boston abandoned much of its Puritan reserve. The modern city's sense of neighborhood and its tolerance of different ways have sparked a new migration of the young to Boston, and elegant bars like Copley's set the fashion for singles and the light of heart (below).
